                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                            hepatotropic, antigout, antiinflammatory and antiHTV activities, and regulate protein transport. PTAM proteins and antagonists are useful for preventing or treating a disorder associated with decreased or increased expression or activity of PTAM. PTAM polynucleotides are useful for diagnosing conditions associated with PTAM, comprising detecting PTAM by forming a hybridisation complex, preferably after PCR amplifying the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      blological sample. Diseases prevented, treated or diagnosed include cell proliferative disorders such as cancers, immune disorders, secretory disorders and other conditions associated with abnormal vesicle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    haemolytic anaemia. Anti-PTAM antibodies may be used as antagonists, as a targeting or delivery mechanism for bringing pharmaceutical agents into cells or tissues expressing PTAM and for diagnosis of PTAM-related disorders. PTAM, its catalytic or immunogenic fragments are useful for drug screening using libraries of compounds. PTAM polynucleotides are
                                                                                                                                                                                                                                                                                                antiarteriosclerotic, antiallergic, antidiabetic, antilipaemic, antirheumatic, osteopathic, dermatological, antianaemic, antipsoriatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; NTF2 associated protein 16; cancer; HIV infection; gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NFFDTLPSSEFQVNMLDCQPVHEQATQSQTTVLVVTSGTVKFDGNKQHFFNQNFLLTAQS 120

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a squence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a compluence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the protein and or all agnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the constant and an allow obtaining of the full-length cDNAs assily without any specialized methods. diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -

Claim 11; SEQ ID No 1180; 980pp; English.

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice,

rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. rhoppasses or enzyme linked include autoimmune diseases e.g. rhoppasses or enzyme linked configurative disorders e.g. rhoppasses of the breast or liver, cardiovascular disorders e.g. recebral ischaemia, anglogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungical and wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before

transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be as a food additive or preservative to increase or decrease storage

capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention.

New nucleic acid molecules encoding 461 human secreted proteins for

WPI; 2001-488783/53. N-PSDB; AAS26214.

```
MAA08035 to AAA08042 encode the human protein transport-associated molecules (PTAMS) given in AAY83317 to AAY8234. The PTAMS have cytostatic, antiathritic, antiathratic, immunosuppressant, antiatricisclerotic, antiallergic, antidabetic, antilipaemic, antiatricisclerotic, antiallergic, antidabetic, antilipaemic, equivation, antigout, antidation, antigout, antidation antiling antiling antiporticis, and creating a disorder associated with decreased or increased expression or activity of PTAM. PTAM polynucleotides are useful for preventing or treating a disorder associated with decreased or increased dagnosing conditions associated with PTAM, comprising detecting PTAM by forming a hybridisation complex, preferably after PCR amplifying the biological sample. Diseases prevented, treated or diagnosed include cell proliferative disorders such as cancers, immune disorders, secretory disorders and other conditions associated with abnormal vesicle trafficking, such as allergies, asthma, uritcarla and autoimmune trafficking, such as allergies, asthma, uritcarla and autoimmune trafficking, such as allergies, asthma, uritcarla and autoimmune a targeting or delivery mechanism for bringing pharmaceutical agents into cells or tissues expressing PTAM and for diagnosis of PTAM: related disorders. PTAM, its catalytic or immunogenic fragment are useful for cuseful for generating mybridisation probes useful in mapping the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                               New human protein transport-associated polypeptide and polynucleotide useful for diagnosis, prevention and treatment of cell proliferative and secretory disorders such as leukemia, cystic fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DTLPSSEFQVNMLDCQPVHEQATQSQTTVLVVTSGTVKFDGNKQHFFNQNFLLTAQSTPN 123

conceded georeted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They to a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also diagnostic immunosays e.g. radioimmunoasays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, contingentic disorders e.g. rheumatoid arthritis, can liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. nervous system disorders e.g. ardiocans and fungicand ocular disorders e.g. nervous system disorders e.g. and ocular disorders e.g. corneal infection, and many other disorders listed in the specification, and many other disorders listed in the specification, and many other content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64 DILPSSEFQVNMLDCQPVHEQAIQSQTIVLVVISGTVKFDGNKQHFFNQNFLLIAQSIPN 123

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides; therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    66 LPSSEFQVNMLDCQPVHEQATQSQTTVLVVTSGTVKFDGNKQHFFNQNFLLTAQSTPNNT 125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        64 LPSSNHQLNTLDAQPIVDQAVSNQLAYLIMASGSVKFADQQLRKFQQTFIVTAE----ND 119

```
capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176 ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ---- OPVHEQATQSQTTVLVVTSGTVKFDGNKQHFFNQNFLLTAQSTPNNTVWKIASDCF 134

                                                                                              8-APR-
                                                                                                             0-APR-1
                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences genomic DNA sequences (ABLi6176-ABL30511), expressed DNA (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   79 ---- QPVHEQATQSQTTVLVVTSGTVKFDGNKQHFFNQNFLLTAQSTPNNTVWKIASDCF 134

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 420,

Submitted. (MAR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Stimulator of protein export for NES-containing
proteins. Also plays a role in the nuclear export of Ul s
trna, and mrna (By similarity)
-!- SUBUNIT: Preferentially binds. Ran-GTP (By similarity)
-!- SUBCELDURA LOCATION: Nuclear (By similarity)
-!- SIMILARITY: CONTAINS 1 NTF2 DOMAIN.

-1- FUNCTION: FACILITATES PROTEIN TRANSPORT INTO THE NUCLEUS.

INTERACTS WITH THE NUCLEOPORIN P62 AND WITH RAN. ACTS AT A

RELATIVELY LATE STAGE OF NUCLEAR PROTEIN IMPORT, SUBSEQUENT TO THE
INITIAL DOCKING OF NUCLEAR. IMPORT LIGAND AT THE NUCLEAR ENVELOPE.

COULD BE PART OF A MULTICOMPONENT SYSTEM OF CYTOSOLIC FACTORS THAT

ASSEMBLE AT THE PORE COMPLEX DURING NUCLEAR IMPORT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Stewart M., Kent H.M., McCoy A.J.; "Structural basis for molecular recognition between nuclear transport factor 2 (NTF2) and the GDP-bound form of the Ras-family GTPase

Meyer U., Meyer M., Techel D., Toeken K., Rensing L.;
Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: FACILITATES PROTEIN TRANSPORT INTO THE NUCLEUS. COULD BE
PART OF A MULTICOMPONENT SYSTEM OF CYTOSOLIC FACTORS THAT ASSEMBLE
AT THE PORE. COMPLEX DURING NUCLEAR IMPORT (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).
-!- SIMILARITY: CONTAINS 1 NTF2 DOMAIN.
